SECTION 7.4

Sales Tax and Commission

Objectives

- A** Solve application problems involving sales tax.
- B** Solve application problems involving commission.

A Sales Tax

Example 1

Suppose the sales tax rate in Mississippi is 6% of the purchase price. If the price of a refrigerator is \$550, how much sales tax must be paid?

Solution:

Because the sales tax is 6% of the purchase price, and the purchase price is \$550, the problem can be restated as:

What is 6% of \$550?

Example 1 – Solution

cont'd

We solve this problem, by translating it into an equation:

What is 6% of \$550?

$$\begin{array}{ccccccc} \downarrow & \downarrow & \downarrow & \downarrow & \downarrow & & \\ n & = & 0.06 & \cdot & 550 & & \end{array}$$

$$n = 33$$

The sales tax is \$33.

The total price of the refrigerator would be

$$\begin{array}{ccccc} \text{Purchase price} & & \text{Sales tax} & & \text{Total price} \\ \downarrow & & \downarrow & & \downarrow \\ \$550 & + & \$33 & = & \$583 \end{array}$$

B Commission

Commission

Many salespeople work on a *commission* basis. That is, their earnings are a percentage of the amount they sell.

The *commission rate* is a percent, and the actual commission they receive is a dollar amount.

Example 4

A real estate agent gets 3% of the price of each house she sells. If she sells a house for \$289,500, how much money does she earn?

Solution:

The commission is 3% of the price of the house, which is \$289,500.

We restate the problem as:

What is 3% of \$289,500?

$$\begin{array}{c} \downarrow \downarrow \downarrow \downarrow \downarrow \\ n = 0.03 \cdot 289,500 \end{array}$$

$$n = 8,685$$

The commission is \$8,685.
